This statement is not  
satisfactory. From the  
minutes in office it  
appears to be no vacancy  
between Wood's line  
and Bassett's line.  
The surveyor has to show  
that he has found the  
correctness of the respective  
surveys on the ground  
and by which witnesses  
he found them, and give  
the dimensions of their wa-

The surveyor states with  
 in that he surveyed several  
 surveys but neglects to  
 give the dimensions from  
 on the ground. Some are  
 meeting lines run by J. R.  
 Condina it appears that  
 nearly all old surveys for  
 ticular that run by Esch  
 are laid on the ground  
 as their field notes call for.  
 So the adjoining surveys of  
 Steubridy shows that its  
 N. line is 1140 instead of  
 1344 and it is very likely  
 that the G. Hoop survey lies  
 around the N. W. cor. of the C.  
 Hoop survey which will  
 make the G. Hoop and the  
 A. Talbot adjoining each  
 other. Surveyor must show  
 that he found the corners on  
 the ground and give the true  
 distances. October 20 1876
